Name _____   Date _____

1. You have been hired by a company to write a report on Internet companies' Wi-Fi ranges. They have requested that <u>all values be reported in feet using scientific notation</u>.

    Ivan's Internet Company boasts that its wireless access points have the greatest range. The company claims that you can access its signal up to 2,640 feet from its device. A competing company, Winnie's Wi-Fi, has devices that extend to up to $2\frac{1}{2}$ miles.

    a. Rewrite the range of each company's wireless access devices in feet using scientific notation, and state which company actually has the greater range (5,280 feet = 1 mile).

    b. You can determine how many times greater the range of one Internet company is than the other by writing their ranges as a ratio. Write and find the value of the ratio that compares the range of Winnie's wireless access devices to the range of Ivan's wireless access devices. Write a complete sentence describing how many times greater Winnie's Wi-Fi range is than Ivan's Wi-Fi range.

Module 1:   Integer Exponents and Scientific Notation

c. UC Berkeley uses Wi-Fi over Long Distances (WiLD) to create long-distance, point-to-point links. UC Berkeley claims that connections can be made up to 10 miles away from its device. Write and find the value of the ratio that compares the range of Ivan's wireless access devices to the range of Berkeley's WiLD devices. Write your answer in a complete sentence.

2. There is still controversy about whether or not Pluto should be considered a planet. Although planets are mainly defined by their orbital path (the condition that prevented Pluto from remaining a planet), the issue of size is something to consider. The table below lists the planets, including Pluto, and their approximate diameters in meters.

Planet	Approximate Diameter (m)
Mercury	4.88×10^6
Venus	1.21×10^7
Earth	1.28×10^7
Mars	6.79×10^6
Jupiter	1.43×10^8
Saturn	1.2×10^8
Uranus	5.12×10^7
Neptune	4.96×10^7
Pluto	2.3×10^6

a. Name the planets (including Pluto) in order from smallest to largest.

EUREKA MATH™

Module 1:   Integer Exponents and Scientific Notation

engage^{ny}

b.   Comparing only diameters, about how many times larger is Jupiter than Pluto?

c.   Again, comparing only diameters, find out about how many times larger Jupiter is compared to Mercury.

d.   Assume you are a voting member of the International Astronomical Union (IAU) and the classification of Pluto is based entirely on the length of the diameter. Would you vote to keep Pluto a planet or reclassify it? Why or why not?

e. Just for fun, Scott wondered how big a planet would be if its diameter was the square of Pluto's diameter. If the diameter of Pluto in terms of meters were squared, what would the diameter of the new planet be? (Write the answer in scientific notation.) Do you think it would meet any size requirement to remain a planet? Would it be larger or smaller than Jupiter?

3. Your friend Pat bought a fish tank that has a volume of 175 liters. The brochure for Pat's tank lists a "fun fact" that it would take 7.43×10^{18} tanks of that size to fill all the oceans in the world. Pat thinks the both of you can quickly calculate the volume of all the oceans in the world using the fun fact and the size of her tank.

   a. Given that 1 liter $= 1.0 \times 10^{-12}$ cubic kilometers, rewrite the size of the tank in cubic kilometers using scientific notation.

   b. Determine the volume of all the oceans in the world in cubic kilometers using the "fun fact."

EUREKA MATH™

engage^ny

c.   You liked Pat's fish so much you bought a fish tank of your own that holds an additional 75 liters. Pat asked you to figure out a different "fun fact" for your fish tank. Pat wants to know how many tanks of this new size would be needed to fill the Atlantic Ocean. The Atlantic Ocean has a volume of 323,600,000 cubic kilometers.

A Progression Toward Mastery					
Assessment Task Item		STEP 1 Missing or incorrect answer and little evidence of reasoning or application of mathematics to solve the problem.	STEP 2 Missing or incorrect answer but evidence of some reasoning or application of mathematics to solve the problem.	STEP 3 A correct answer with some evidence of reasoning or application of mathematics to solve the problem, OR An incorrect answer with substantial evidence of solid reasoning or application of mathematics to solve the problem.	STEP 4 A correct answer supported by substantial evidence of solid reasoning or application of mathematics to solve the problem.
1	a–c 8.EE.A.3 8.EE.A.4	Student completes part (a) correctly by writing each company's Wi-Fi range in scientific notation and determines which is greater. Student is unable to write ratios in parts (b)–(c). OR Student is unable to perform operations with numbers written in scientific notation and does not complete parts (b)–(c). OR Student is able to write the ratios in parts (b)–(c) but is unable to find the value of the ratios.	Student completes part (a) correctly. Student is able to write ratios in parts (b)–(c). Student is able to perform operations with numbers written in scientific notation in parts (b)–(c) but makes computational errors leading to incorrect answers. Student does not interpret calculations to answer questions.	Student answers at least two parts of (a)–(c) correctly. Student makes a computational error that leads to an incorrect answer. Student interprets calculations correctly and justifies the answers. Student uses a complete sentence to answer part (b) or (c).	Student answers all parts of (a)–(c) correctly. Ratios written are correct and values are calculated accurately. Calculations are interpreted correctly and answers are justified. Student uses a complete sentence to answer parts (b) and (c).
2	a–c 8.EE.A.3 8.EE.A.4	Student correctly orders the planets in part (a). Student is unable to perform operations with numbers written in scientific notation.	Student completes two or three parts of (a)–(c) correctly. Calculations have minor errors. Student provides partial justifications for conclusions made.	Student completes two or three parts of (a)–(c) correctly. Calculations are precise. Student provides justifications for conclusions made.	Student completes all three parts of (a)–(c) correctly. Calculations are precise. Student responses demonstrate mathematical reasoning leading to strong justifications for conclusions made.

Name _____   Date _____

1. You have been hired by a company to write a report on Internet companies' Wi-Fi ranges. They have requested that <u>all values be reported in feet using scientific notation</u>.

   Ivan's Internet Company boasts that its wireless access points have the greatest range. The company claims that you can access its signal up to 2,640 feet from its device. A competing company, Winnie's Wi-Fi, has devices that extend to up to $2\frac{1}{2}$ miles.

   a. Rewrite the range of each company's wireless access devices in feet using scientific notation, and state which company actually has the greater range (5,280 feet = 1 mile).

   IVAN'S RANGE: $2{,}640 = 2.64 \times 10^3$ ft

   WINNIE'S RANGE: $(2.5)5280 = 13200 = 1.32 \times 10^4$ ft.

   WINNIE'S WI-FI HAS THE GREATER RANGE.

   b. You can determine how many times greater the range of one Internet company is than the other by writing their ranges as a ratio. Write and find the value of the ratio that compares the range of Winnie's wireless access devices to the range of Ivan's wireless access devices. Write a complete sentence describing how many times greater Winnie's Wi-Fi range is than Ivan's Wi-Fi range.

   WINNIE TO IVAN'S RATIO — $(1.32 \times 10^4) : (2.64 \times 10^3)$

   VALUE OF RATIO $\dfrac{1.32 \times 10^4}{2.64 \times 10^3} = \dfrac{1.32}{2.64} \times \dfrac{10^4}{10^3} = \dfrac{1}{2} \times 10 = 5$

   WINNIE'S WI-FI IS 5 TIMES GREATER IN RANGE THAN IVAN'S INTERNET COMPANY.

c. UC Berkeley uses Wi-Fi over Long Distances (WiLD) to create long-distance, point-to-point links. UC Berkeley claims that connections can be made up to 10 miles away from its device. Write and find the value of the ratio that compares the range of Ivan's wireless access devices to the range of Berkeley's WiLD devices. Write your answer in a complete sentence.

$(10)5280 = 52800 = 5.28 \times 10^4$

IVAN'S TO BERKELEY RATIO: $(2.64 \times 10^3) : (5.28 \times 10^4)$

VALUE OF RATIO — $\dfrac{2.64 \times 10^3}{5.28 \times 10^4} = \dfrac{2.64}{5.28} \times \dfrac{10^3}{10^4} = \dfrac{1}{2} \times \dfrac{1}{10} = \dfrac{1}{20}$

IVAN'S INTERNET DEVICES HAVE A RANGE $\frac{1}{20}$ THE RANGE OF UC BERKELEY'S WILD DEVICES.

2. There is still controversy about whether or not Pluto should be considered a planet. Although planets are mainly defined by their orbital path (the condition that prevented Pluto from remaining a planet), the issue of size is something to consider. The table below lists the planets, including Pluto, and their approximate diameters in meters.

Planet	Approximate Diameter (m)
Mercury	4.88×10^6
Venus	1.21×10^7
Earth	1.28×10^7
Mars	6.79×10^6
Jupiter	1.43×10^8
Saturn	1.2×10^8
Uranus	5.12×10^7
Neptune	4.96×10^7
Pluto	2.3×10^6

a. Name the planets (including Pluto) in order from smallest to largest.

PLUTO, MERCURY, MARS, VENUS, EARTH, NEPTUNE, URANUS, SATURN, JUPITER

b.　Comparing only diameters, about how many times larger is Jupiter than Pluto?

$$\frac{1.43 \times 10^8}{2.3 \times 10^6} = \frac{1.43}{2.3} \times \frac{10^8}{10^6}$$

$$\approx 0.622 \times 10^2$$

$$\approx 62.2$$

THE DIAMETER OF JUPITER IS ABOUT 62 TIMES LARGER THAN PLUTO.

c.　Again, comparing only diameters, find out about how many times larger Jupiter is compared to Mercury.

$$\frac{1.43 \times 10^8}{4.88 \times 10^6} = \frac{1.43}{4.88} \times \frac{10^8}{10^6}$$

$$\approx 0.293 \times 10^2$$

$$\approx 29.3$$

THE DIAMETER OF JUPITER IS ABOUT 29 TIMES LARGER THAN MERCURY.

d.　Assume you are a voting member of the International Astronomical Union (IAU) and the classification of Pluto is based entirely on the length of the diameter. Would you vote to keep Pluto a planet or reclassify it? Why or why not?

I WOULD VOTE TO RECLASSIFY IT. KNOWING THAT JUPITER IS 29 TIMES LARGER THAN MERCURY MEANS MERCURY IS PRETTY SMALL. JUPITER IS 62 TIMES LARGER THAN PLUTO, WHICH MEANS PLUTO IS EVEN SMALLER THAN MERCURY. FOR THAT REASON I'D VOTE THAT THE LENGTH OF THE DIAMETER OF PLUTO IS TOO SMALL COMPARED TO OTHER PLANETS (EVEN THE SMALL ONE).

e. Just for fun, Scott wondered how big a planet would be if its diameter was the square of Pluto's diameter. If the diameter of Pluto in terms of meters were squared, what would the diameter of the new planet be? (Write answer in scientific notation.) Do you think it would meet any size requirement to remain a planet? Would it be larger or smaller than Jupiter?

$$(2.3 \times 10^6)^2 = 2.3^2 \times (10^6)^2$$
$$= 5.29 \times 10^{12}$$

YES, 5.29×10^{12} WOULD LIKELY MEET ANY SIZE REQUIREMENT FOR PLANETS. IT WOULD BE LARGER THAN JUPITER.

3. Your friend Pat bought a fish tank that has a volume of 175 liters. The brochure for Pat's tank lists a "fun fact" that it would take 7.43×10^{18} tanks of that size to fill all the oceans in the world. Pat thinks the both of you can quickly calculate the volume of all the oceans in the world using the fun fact and the size of her tank.

a. Given that 1 liter $= 1.0 \times 10^{-12}$ cubic kilometers, rewrite the size of the tank in cubic kilometers using scientific notation.

$$175 \text{ LITERS} = 175(1.0 \times 10^{-12}) \text{ CUBIC KILOMETERS}$$
$$= 175 \times 10^{-12} \text{ KM}^3$$
$$= 1.75 \times 10^{-10} \text{ KM}^3$$

b. Determine the volume of all the oceans in the world in cubic kilometers using the "fun fact."

$$(1.75 \times 10^{-10})(7.43 \times 10^{18}) = (1.75 \times 7.43)(10^{-10} \times 10^{18})$$
$$= 13.0025 \times 10^8$$
$$= 1.30025 \times 10^9$$

THE VOLUME OF ALL THE OCEANS IN THE WORLD IS (1.30025×10^9) KM^3.

c. You liked Pat's fish so much you bought a fish tank of your own that holds an additional 75 liters. Pat asked you to figure out a different "fun fact" for your fish tank. Pat wants to know how many tanks of this new size would be needed to fill the Atlantic Ocean. The Atlantic Ocean has a volume of 323,600,000 cubic kilometers.

TANK : 175 + 75 = 250 LITERS

250 LITERS = $250(1.0 \times 10^{-12})$ KM³
$= 250 \times 10^{-12}$
$= 2.5 \times 10^{-10}$

ATLANTIC OCEAN : 323,600,000
$= 3.236 \times 10^{8}$ KM³

$\dfrac{3.236 \times 10^{8}}{2.5 \times 10^{-10}} = \dfrac{3.236}{2.5} \times \dfrac{10^{8}}{10^{-10}}$

$= 1.2944 \times 10^{18}$

IT WOULD TAKE 1.2944×10^{18} TANKS (OF SIZE 250 LITERS) TO FILL THE ATLANTIC OCEAN.
