

Lesson 2: Multiplying and Factoring Polynomial Expressions

Classwork

Example 1: Using a Table as an Aid

Use a table to assist in multiplying $(x + 7)(x + 3)$.

	x	$+$	7
x	x^2		$7x$
$+$			
3	$3x$		21

Exercise 1

- Use a table to aid in finding the product of $(2x + 1)(x + 4)$.

POLYNOMIAL EXPRESSION: A *polynomial expression* is either:

- A numerical expression or a variable symbol, or
- The result of placing two previously generated polynomial expressions into the blanks of the addition operator ($_ + _$) or the multiplication operator ($_ \times _$).

Exercises 2–6

Multiply the following binomials; note that every binomial given in the problems below is a polynomial in one variable, x , with a degree of one. Write the answers in standard form, which in this case takes the form $ax^2 + bx + c$, where a , b , and c are constants.

2. $(x + 1)(x - 7)$

3. $(x + 9)(x + 2)$

4. $(x - 5)(x - 3)$

5. $\left(x + \frac{15}{2}\right)(x - 1)$

6. $\left(x - \frac{5}{4}\right)\left(x - \frac{3}{4}\right)$

Describe any patterns you noticed as you worked.

Exercises 7–10

Factor the following quadratic expressions.

7. $x^2 + 8x + 7$

8. $m^2 + m - 90$

9. $k^2 - 13k + 40$

10. $v^2 + 99v - 100$

Lesson Summary

Multiplying binomials is an application of the distributive property; each term in the first binomial is distributed over the terms of the second binomial.

The area model can be modified into a tabular form to model the multiplication of binomials (or other polynomials) that may involve negative terms.

When factoring trinomial expressions (or other polynomial expressions), it is useful to look for a GCF as your first step.

Do not forget to look for these special cases:

- The square of a binomial
- The product of the sum and difference of two expressions.

Problem Set

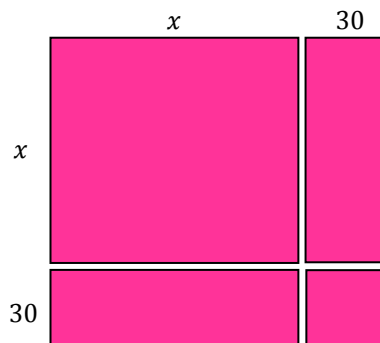

1. Factor these trinomials as the product of two binomials, and check your answer by multiplying.

- a. $x^2 + 3x + 2$
- b. $x^2 - 8x + 15$
- c. $x^2 + 8x + 15$

Factor completely.

- d. $4m^2 - 4n^2$
- e. $-2x^3 - 2x^2 + 112x$
- f. $y^8 - 81x^4$

2. The square parking lot at Gene Simon's Donut Palace is going to be enlarged so that there will be an additional 30 ft. of parking space in the front of the lot and an additional 30 ft. of parking space on the side of the lot, as shown in the figure below. Write an expression in terms of x that can be used to represent the area of the new parking lot.

Explain how your solution is demonstrated in the area model.
